What Is Fioricet?

Fioricet is a prescription medication commonly used to treat tension headaches and certain types of migraines. It combines three active ingredients:

- **Butalbital** – a barbiturate that relaxes muscle contractions involved in tension headaches
- **Acetaminophen** – a pain reliever and fever reducer
- **Caffeine** – enhances pain relief and improves blood flow by relaxing muscle contractions

Together, these components work to alleviate headache pain, reduce muscle tension, and enhance overall comfort. Because Fioricet contains butalbital, a controlled substance in some jurisdictions, it must be used under medical supervision and obtained through a valid prescription.
